- Control awning's LED lights remotely (on/off/dim)
- Ignition interlock prevents accidental opening while RV is moving
- Remote control operates up to 100 ft/30 m away from campsite

REMOTE CONTROL & WIND SENSOR FOR ANY POWER AWNING

This Dometic Power Awning Pro control system works with any power awning on the market, giving you

remote control of the awning up to 100 ft/30 m away from your campsite. You can open and close the awning and control the awning’s LED lights (on, off, and dim) remotely. High winds can easily damage your awning, especially if you’re not nearby to close it quickly. The Power Awning Pro includes an advanced wind sensor that closes the awning automatically when high winds are detected. No need to worry while you are away from the campsite. An ignition interlock prevents the awning from being opened accidentally while the RV is moving, for more safety on the road. The Power Awning Pro installs in parallel with the existing awning switch of any power awning and uses the receiver to control the awning based on input from the remote, the wind sensor, and the awning switch.

SPECIFICATIONS

GENERAL

- SKU number** 9108893672
- Model** Power Awning Pro
